

CardLogix Holofoil Card

High Quality Holofoil Cards for Increased Security

CardLogix Holofoil Cards are constructed with commercial grade substrates compliant with ISO-7810, ID1 standards. These cards include clear, iridescent Holofoil images with twelve unique designs to choose from.

Holofoil imaging is one of several security printing options that make fraudulent duplication a difficult task, thereby increasing the card's security. These lightshifting images have the appearance of Holograms, and they are a much more cost-effective option. With our pre-stamped Holofoil cards, you can personalize each card by printing over the Holofoil image, or you can print on the other side of the card.

Holofoil cards provide a smart foundation for a card's physical security and printing needs. For higher security, holofoils can be combined with CardLogix ReadyStart™ Secure Cards that include a combination of ready designed high security graphics, such as guilloche, microtext, UV, hidden images and intentional errors.

Holofoil Card Options

- Precision Identity Grade substrate:
This is a good option if printing additional images is required, such as an employee badge, and if dimensional tolerances are critical.
- Government Certified substrate:
These cards are designed by CardLogix in order to meet the continuous card body certification requirements by some programs.
- Custom artwork and information can be printed underneath the Holofoil image. This option allows for a brighter Holofoil image than the standard option.
- 12 unique Holofoil designs to choose from.
- Magnetic Stripe, Contact and Contactless smart cards are all available with these options.

Benefits and Features

- Increased security
- ISO-7810, ID1 compliant
- Convenient pre-designed and pre-stamped Holofoil images
- idblox® approved
