

CardLogix Upgrades Smart Toolz® For Smart Card System Design

Irvine, CA - September 13, 2010 – CardLogix, a leading manufacturer of smart cards and software, announced today a major upgrade of its Smart Toolz® Smart Card Development Kit. Smart Toolz enables the development of a smart card system for a wide variety of applications, including Identity, Healthcare, Stored Value, and Loyalty.

This new Smart Toolz features:

- A completely new Card Configuration Utility (CCU) – a feature-rich tool that simplifies and speeds up card development and testing
- Contactless smart card support with software, cards, and a dual mode reader
- Enhanced Winplex® middleware with .NET support

The Smart Toolz Card Configuration Utility is the newest tool for configuring and testing a card structure, efficiently focusing development on the exact card features that are desired. This reduces time-intensive research and documenting, and streamlines card design.

CCU Features

- An on-card data and security modeler to configure all security functions and to set up files
- An on-card data editor for loading, editing card data, and enabling better visibility into its use with a secondary application. The editor also sets up on-card data security, such as encryption and permissions, for each configuration and sector.
- A key vault for managing all of the keys used for a particular security profile

Smart Toolz Features

- The CardAppz® Demonstration Tool for 'test driving' a card application. CardAppz helps non-programmers to fully demonstrate card capabilities within a completely configurable card database and system in order to illustrate a customer design concept. CardAppz is also powerful enough to demonstrate programmer-configurable options, such as user interface and security, in their custom applications
- Five different contact memory smart cards, and five different contactless cards, including MIFARE™ types
- A model SD1010 dual mode contactless card reader from SCM Microsystems, Inc.
- Winplex® middleware for loading card data, with programming examples for C++, .NET, and Visual Basic

Smart Toolz provides full support for Windows XP, Server 2003, and Vista, as well as support for all the latest-generation CardLogix cards and file types, including extended file types.

Smart Toolz sells for a suggested retail price of \$299, and is available at authorized resellers, the CardLogix webstore at www.cardlogix.com/products/software/devtools.asp, and the corporate sales office at (949) 380-1312. For more information about Smart Toolz, contact sales@cardlogix.com.

About CardLogix Corporation

CardLogix is an ISO 9001:2008 certified quality manufacturer of smart cards and software for the secure transaction of data and value. CardLogix makes smart card development intuitive and accessible with a spectrum of software, including development tools, operating systems, middleware, applications, and third party solutions .
