13.56 MHz Contactless Smart Card Reader Technology

We smart you up.

CardMan[®] 5121 PC-Linked 13.56 MHz RFID Smart Card Reader

OMNIKEY, one of the world's leading manufacturers of innovative smart card readers, has developed a practical and affordable dual interface smart card reader. The CardMan[®] 5121 combines the advantages of contactless and contact smart card technology in a single USB desktop device.

OMNIKEY'S CardMan 5121

The CardMan 5121 is a dual interface PC-linked reader that will read/write to both a 13.56 MHz RFID contactless smart card and virtually any contact smart card. The dual interface feature economically supports end-user environments where both contactless and contact smart card technology may be in use.

Purpose of a Dual Interface Reader

Many end-users currently use a contactless smart card for building access, as a corporate or student ID, or for transit or cashless vending applications. The CardMan 5121 provides an economical means for end-users to implement new PC-linked applications without having to re-badge.

The addition of contact smart card capability allows for future expansion as needs change or as users within the facility require different levels of security or functionality. Should you require contact smart card functionality only, OMNIKEY offers a diversified product portfolio that is designed to support any smart card on any computer for any application.

Supported Applications

The CardMan 5121 allows users to experience the convenience, speed, and security of contactless technology for applications including log-on to Windows®, networks, websites, and applications or the secure storage of user names, passwords, and personal information. The use of contactless smart card technology for PC-linked applications is limited only to your imagination!

Contactless Smart Cards Supported

The CardMan 5121 is based on a 13.56 MHz contactless smart card RFID interface that is compliant with ISO specifications 14443 A and B and 15693. The reader works with a variety of 13.56 MHz contactless smart cards including, but not limited to:

- Philips: MIFARE®, DESFire®, MIFARE ProX®, and i.code
- HID: iCLASS®
- Texas Instruments: TaglT[®]
- ST Micro: x-ident, SR 176, SR 1X 4K
- Infineon: My-d (in secure mode UID only)
- Atmel: AT088RF020
- KSW MicroTech: KSW TempSens

If you are using a 13.56 MHz contactless smart card for other applications, use the same card for PC-linked applications today!

Consistent with OMNIKEY's tradition of offering robust, technically superior firmware and driver support, the CardMan 5121 guarantees the highest level of interoperability available on the market. By sharing the same state-of-the-art technology features of the CardMan 3121, OMNIKEY's contact smart card reader with USB interface, compliance with major standards such as ISO 7816, PC/SC, Microsoft WHQL, and EMV 2000 Level 1 specifications is guaranteed.

CardMan® 5121

Insert contactless smart card in the slot to use as a cardholder mechanism.

Use a contact smart card in the same reader for your contact smart card applications!

USB 2.0 CCID¹ (also supports 1.1) Transmission speed Power supply Bus powered Contact Smart Card Interface Compliant with ISO 7816 and EMV² 2000 Level 1 Supports T=0, T=1 Supports 2-wire: SLE 4432/42 (S=10) 3-wire: SLE4418/28 (S=9) Supports I²C (S=8) Supports SLE 4404 Card size High performance smart card interface (up to 420 Kbps when supported by card) Smart card clock frequency up to 8 MHz Supports SV, 3V, and 1.8V smart cards Supplies 60 mA current to power the smart card Smart card movement detection with auto power-off Automatic detection of smart card type Short circuit and thermal protection 8 pin handling (C4 / C8 supported) Contactless (RFID) Smart Card Interface ISO 14443 A ISO 14443 B ISO 15693 V Other Features Single LED status indicator (green=ready, red= busy) Light base with adapter for horizontal or vertical positioning, plus attachment pad for mounting the reader (i.e., on a monitor) Options Customer specific logo and/or label On request
